

Introduction

This tape is especially for shading protection for sand blasting. When using the tape, just wrap the high temperature masking tape around the area requiring protection, and then wrap the sandblasting tape (WISDOM50) on the high temperature shielding masking tape. For all of the tapes, we suggest wrapping two or more layers for better protection and pressing hard on the pressure head of the tape. The rotation direction of the work piece should ensure that the pressure head follows the direction of the spray gun. Tear off the sandblasting masking tape after the sand blasting process is completed, and the high temperature masking tape part will be left to directly perform the spraying operation.

Applications

- It applies to shading protection for sandblasting

Standard Sizes & Packaging

Specification	985mmx33m
Length	fixed 33m
Thickness	0.5mm
Width	25mm; 50mm(MOQ: 5 rolls)

Other sizes (diameter and wire weight) can be manufactured accordingly to the requirements of customers.
